

LIFT 150: Ski Lift Operations Train-the-Trainer was developed as an integrated, standardized training program for ski industry operating and maintenance personnel. The content of this course was created by the Ski Resort Operations and Management Program at Selkirk College in partnership with the regulatory authority for passenger ropeways for the Province of British Columbia and the Apprenticeship and Training Committee of the Canada West Ski Areas Association as a standardized formal ski lift operator training program.

LIFT 150: Ski Lift Operations Train-the-Trainer is designed to help ski lift supervisors or managers, develop a comprehensive program for training ski lift operators.

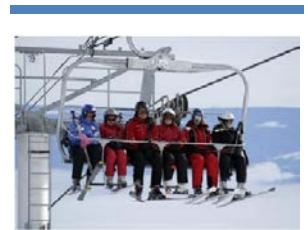

Upon completion of this course, participants will be able to:

1. Explain the need for ski lift safety and the steps required to achieve it,
2. Identify and explain regulations governing ski lifts that relate to lift operator training, and
3. Deliver a ski lift operator's training session.

Ski Lift Operator Trainer Certification (British Columbia Resorts Only)

Currently the BC Elevating Devices Safety Regulation (EDSR) requires mandatory certification of "passenger ropeway trainers." This means that ski lift operator training in BC must be conducted by certified ski lift operator trainers.

LIFT 150 is designed to meet the training needs for ski lift operator trainer certification. Completion of the course and the course exam qualifies course participants for certification by Technical Safety BC as passenger ropeway trainers.

Prerequisite Knowledge

As a prerequisite to taking this course, you should:

- be familiar with one or more passenger ropeway types and their operation,
- have extensive experience in operating ski lifts safely, and
- currently hold a ski lift operations supervisory position which involves the safe operation of ski lifts by personnel under your direct supervision.

The course examination includes questions designed to assess prior knowledge of the safe operation of ski lifts.

Start Dates: Continuous intake beginning Mid-August until Mid- March with last registration by March 1.

Course duration: Three weeks from date of registration to complete all aspects of the course.

Course Composition

The LIFT 150: Ski Lift Operations Train-the-Trainer on line course consists of two parts:

Course Component	Duration
Part 1: Interpretation of Ski Lift Operations Regulations	4 hours (approximately)
Part 1 (cont'): Ski Lift Regulations on line Exam ** (80% grade to pass)	2 hours (maximum)
Part 2: Ski Lift Operator Training Session Design	8 hours (approximately)

**Note:

The test must be written and supervised at a College, High School, or Government Office where there may be an administrative fee charged to the student at the location (this is standard policy among the Colleges in BC). You will be required to contact one of these types of locations in order to make arrangements prior to the date you wish to write the test and then forward the contact information at the location to your online Instructor at Selkirk College who will dispatch the exam password to the contact. Your online Instructor will contact the person supervising your test by email with instructions to confirm the identification of the person taking the exam by viewing photo ID. The person writing the exam will be monitored during the exam to ensure they are working independently.
